

Introducing IP DataDirect – Patents

...from LexisNexis®

Comprehensive content from a single, reliable place and in a single format for your patent research and analysis activities.

Providing information that feeds analysis upon which business decisions will be made can be time-consuming and costly – but incomplete information can cost your business even more. Now LexisNexis, a leading provider of information services and solutions, offers deep patent content to meet the needs of your internal patent research and analysis system.

A single source...a single format

With IP DataDirect - Patents, you have the option to choose the content you need from 22 full-text patent authorities—three times more than is available from any other single provider—as well as bibliographic data from 96 authorities. All content is delivered to you in XML ST.36 format, the standard format set forth by the World Intellectual Property Organization for patent data. This will help save you the time and budget associated with compiling, converting and uploading multiple formats from multiple sources into a single internally-accessible format.

Real-time downloads

Daily updates are available via FTP with convenient 24 hour access. Back-files are delivered to you on a recordable media.

Content

Whatever product or solution you use for searching and retrieving patent information, eventually, it is the content that counts. Whether your search is meant for prior-art, validity, patentability or analytical purposes, you can be confident that you are accessing the most comprehensive content available with IP DataDirect - Patents.

Types of data available:

- Bibliographic – 96 authorities
- Full Text – 22 authorities
- Clipped images
- PDF images – over 50 million compressed, searchable images
- Legal Status
- Patent Family
- Citations
- In the language of original publication and English translations
